# MN Dip & Read Tests for Healthcare

Health care professionals use different types of disinfectants and sanitizers for cleaning of medical devices. Prior to the disinfection of devices it proved useful to control the potency of the disinfection baths. After disinfection all devices have to be rinsed and controlled for sanitizer residues prior to the next use. Dip & Read tests allow the quick and easy detection of sanitizer residues. Thus, MN test strips increase patient safety, while making healthcare professionals' work easier and more efficient.
